

COVER LETTER

I've spent the last few years working inside ecommerce and digital products where small friction points cost real money. I understand that quality isn't just about catching bugs, it's about ensuring the product actually works the way users need it to, especially when things get messy or unexpected.

What stands out to me about this role is the focus on adversarial, real-world testing. I naturally think in "what if" scenarios and have a track record of surfacing issues that only appear under specific conditions, edge cases, tool conflicts, or workflows that don't follow the happy path. I've tested products across platforms and devices, worked closely with engineering teams to translate vague user friction into actionable fixes. I also have experience identifying capability gaps. Moments where a product can't support how users actually work and communicating those clearly without overstepping into solution design.

I'm drawn to early-stage, high-stakes environments where the quality bar directly impacts trust and adoption. The idea of relocating to Bali for a role with this level of ownership and impact is exactly the kind of move I'm looking for right now.

I'd welcome the chance to discuss how I can help raise the quality bar for your onboarding agent and contribute to the company's success from day one.
